HL7 & FHIR®

- FHIR è la risposta di HL7 al mondo delle API.
- Ma a dispetto di Twitter, Facebook ecc HL7 non ha "servizi" o "funzionalità" da offrire..
- FHIR è solo un insieme di modelli standardizzati **flessibili** e best-practice che **altri** possono utilizzare per creare API per la sanità od il sociale
- Sviluppatori di terze parti (APP / software) possono connettersi (se autorizzati) alle vostre API FHIR in maniera semplice.

REST: piccole transazioni, con scambi fra sistemi con debole accoppiamento.

Documenti: Focus sulla persistenza I dati coprono varie risorse

Messaggi Comunicazione di più risorse in un singolo scambio. Forte accoppiamento fra sistemi.

Servizi: Focus sulla capacità di produrre gli effetti voluti in base ai requisiti di business.

AllergyIntolerance [explore the spec →](#)

The AllergyIntolerance data models describe a patient's intolerance to a foreign substance and an associated reaction that occurs from exposure.

Medication + MedicationOrder [explore the spec →](#)

The Medication and MedicationOrder data models combine to model a patient's prescribed medication orders and administration instructions.

Condition [explore the spec →](#)

Conditions can encompass acute and chronic problems and conditions, as well as encounter diagnoses.

Observation - Vital Signs [explore the spec →](#)

This implementation of the Observation resource is limited to the querying for and display of vital signs.

Appointment [explore the spec →](#)

This basic FHIR write service allows a client to schedule an appointment into a slot. We currently only provide prototype support for this resource in our sandbox, to better understand how clients might want to use it in production.

Hackensack University follows FHIR-enabled route to data exchange

Innovations with emerging standards are helping the facility share medical alerts and information across disparate IT systems and devices, says Shafiq Rab, MD, its CIO.

FHIR

Maggie Van Dyke February 17

SMART on FHIR gets a testing ground for data exchange

Developers can share apps that can enable exchanges between EHRs, says Cerner's Bob Robke.

FHIR

Greg Slabodkin February 12

Healthcare connectivity set to take off with value-based care

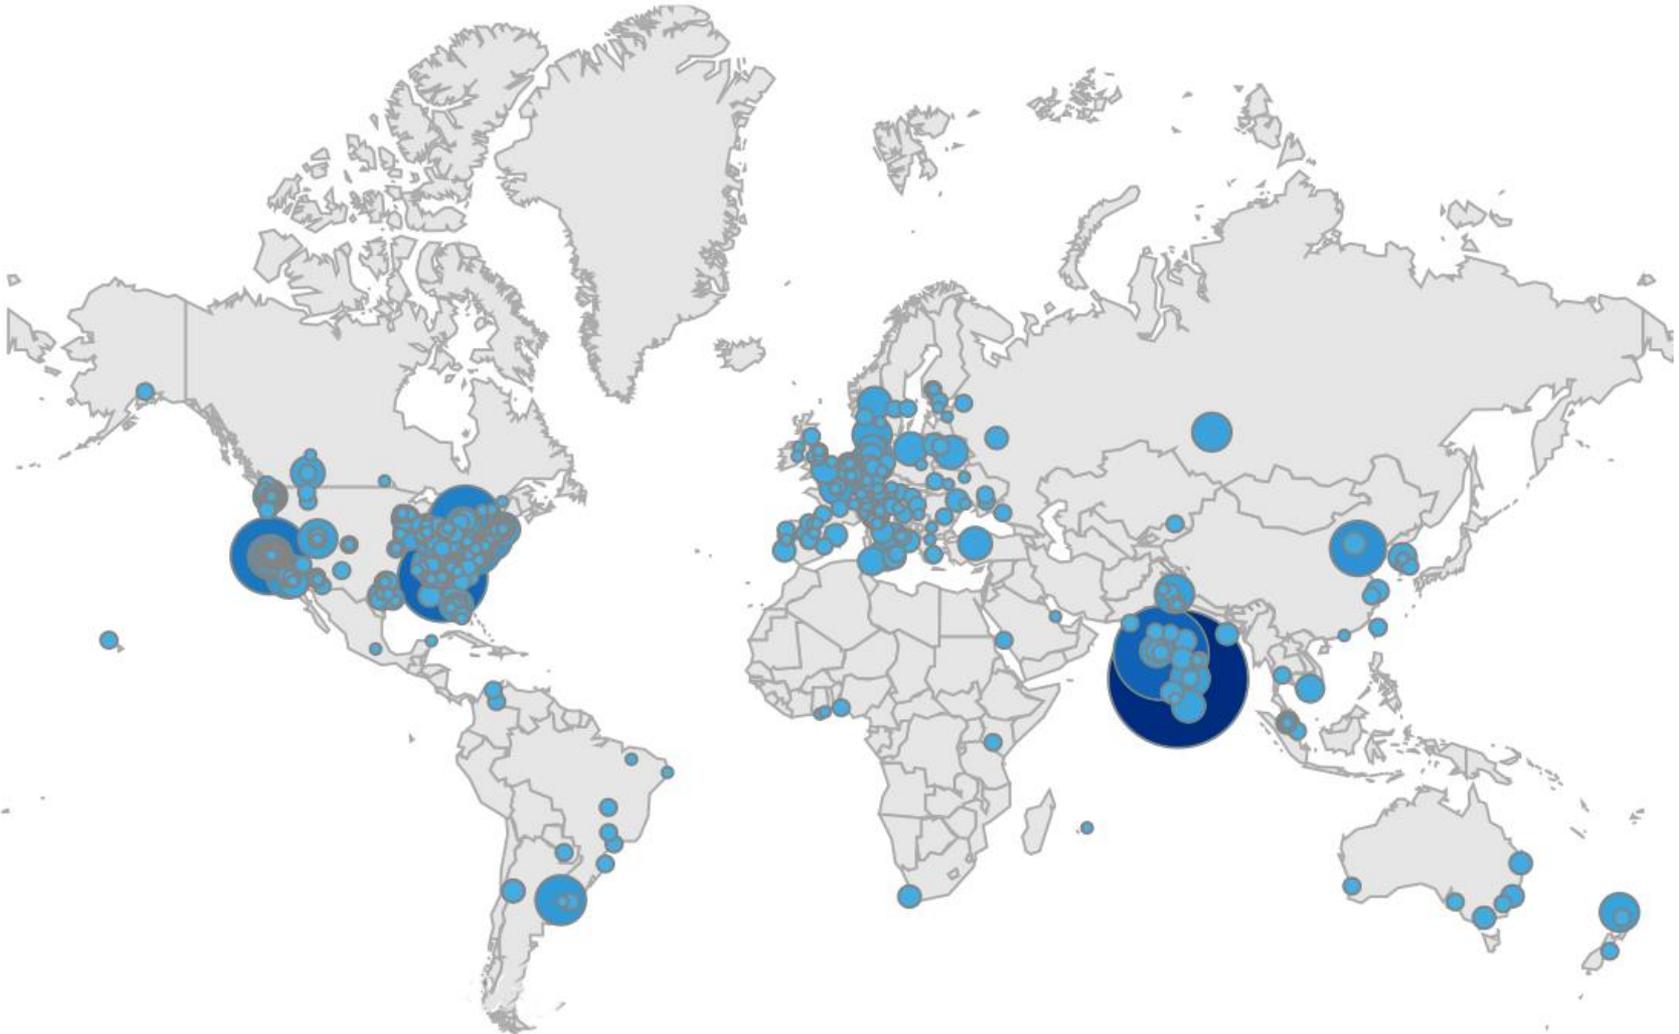

Progress being made on several fronts, including secure messaging, e-prescribing and the exchange of continuity-of-care documents, but leaders such as Micki Tripathi of the Massachusetts E-Health Collaborative say there's still work to be done.

Interoperability

Associazione Italiana Sistemi Informativi in Sanità eHealth 2020

...In sintesi...

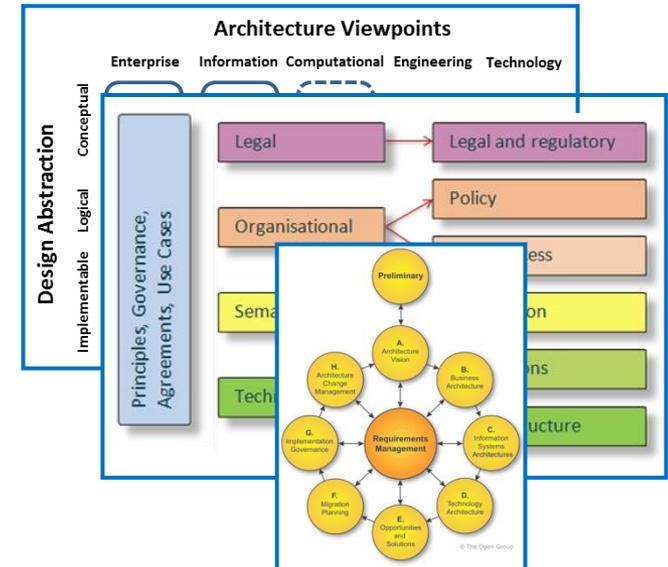

FHIR

- FHIR è adatto per applicazioni in un ampio spettro di ambiti:
 - Il classico scambio di dati intra-istituzionale tra sistemi
 - Personal cloud, social media e mobiles applications
 - in ambito regionale (Regional Health Information Organizations)
 - Su scala nazionale, e.g. sistemi EHR nazionali
- La maggiore attenzione e crescita è attesa nei social media e nelle mobile applications

FHIR non è la “pozione magica” (o “*silver bullet*”)

L'interoperabilità richiede di tener conto di una ampia molteplicità di aspetti

FHIR può rendere la tecnologia più semplice...ma non li può risolvere al vostro posto !

FHIR

- Veloce da imparare, realizzare e per risolvere i problemi
- Maturo perché negli anni sono stati raccolti una quantità rilevante di feedback
- Adozione spontanea (di uno standard!)
- Ha una community open source «vivace» e frequenti connectathons

FHIR Community
